CUSTOMACCES team, the custom division of **MOTOPLASTIC-PUIG**, is proud to introduce the new 2017-2018 catalog and the most important updates that can be visualized on the following pages. Eleven years already in the market and devoted to our main pillar to offer metallic accessories in stainless steel, a feature that differentiate us from our competitors and allow us to guarantee products with no rusting. We would like to emphasized from our catalog the entrance to the Harley-Davidson world with a wide selection of products for the Sportster, the introduction of a new topcase with capacity for two helmets, rigid saddlebags with its corresponding plug&play applications for the most popular bikes in the market, and the new line of detachable sissybars/racks as well as ergonomic levers.

We are manufacturers and, taking advantage of the vast experience of PUIG, we have developed engine guards, sissybars, racks, and all with an easy mounting process, high quality, and competitive pricing.

When this 2017 catalog arrives on your hands, our new website will be operative featuring more visual content (images, videos, aerodynamic tests, etc...), more intuitive, and with a substantial improvement on functionality of our extranet. Either the enduser or dealerships will have a powerful tool to promote and interact with our brand.

We appreciate the trust on our brand during these first 10 years, and we hope this catalog meets the expectations placed on CUSTOMACCES.

TECHNICAL INFO TURN SIGNALS CONNECTIONS

Most of the bikes use bi-metallics relay. Its frequency (which is the one that sets the pace of the turn signals) depend on the amperage circulating through the circuit. When replacing the turn signals from OEM to aftermarket ones which carry a difference power, consequently they vary the amperage circulating through the circuit and that causes a change on the frequency of the turn signals rhythm. If otherwise, the motorcycle uses electronic relay (which frequency works independently from the amperage circulating through the circuit) the change of turn signals from OEM to aftermarket, should not affect the frequency of the turn signals rhythm.

· **Note:** we recommend in case of doubt of what type of relay the motorcycle uses, to check the turn signal rhythm after switching from OEM to aftermarket.

If the OEM turn signals are replaced by aftermarket ones that use incandescent bulbs, it is needed to check they use the same power. In case is different, it is needed to replace the turn signals bulbs for other that uses the same power as OEM ones. On our catalog, we have available bulbs of different power.

If the OEM turn signals are replaced by LED ones (of much less power than incandescent bulbs), we have two options to balance the frequency of rhythm:

1. Incorporate a parallel relay in the right circuit and the other on the left circuit. If we replace four turn signals, it is needed to use a resistance part# HO0001O.
If otherwise, only two turn signals are replaced (one on each side), it is needed to use a resistance part# HO0002O.
The resistance are supplied with a scheme for a parallel connection.

· **Note:** On most of the bikes, the warning function of the bike is unabled if the resistance is used.

2. Identify the intermittence relay of the motorcycle (location and number of pins) and replace for its corresponding from the list supplied.
On most of the bikes, the warning functions works correctly when the relay is replaced.

· **Note:** it can be found on the market some motorcycles that do not have a intermittence relay; obviously, in this case it cannot be replaced. Moreover, if on the blinking function intervenes more than one relay, it is possible that replacing only one relay does not solve the problem.

SALES CONDITIONS

- 1% extra discount sending the order through our extranet on www.customacces.com

RETURN PROCEDURES

- No return will be accepted after 3 months from shipping note.
- The return must be accepted from Motoaccas Ebusiness S.L., after verification of the material by an agent in the area or, otherwise, through an email sent to pedidos@puig.tv requesting the return along with detailed images.
- If the return is not Motoaccas Ebusiness S.L fault, 20% devaluation will be applied and material will need to be sent paid for.
- If the return is because of the transport, the customer will need to send us the transporter's shipping note where should be noted, at the time of the reception of the cartons, the disagreement of the condition of the material. Additionally, images of the cartons in bad condition will need to be sent to us.
