BMC
China

BMC Air Filter is a recognised world leader in the production of air filters and air intake systems for the road and racing segments of the automotive sector. The company supplies both the aftermarket, with a wide range of replacement air filters, and the OEM market, designing and producing entire filtration systems (air-boxes) for leading car manufacturers.

BMC is based in Medicina (Bologna), in the heart of Motor Valley, with branches in China and India, and more than ninety distributors throughout the world.

HISTORY

BMC started in 1973 as an importer of automotive products, when Gaetano Bergami, the founder and current chairman, began importing its first motorcycle products from Japan. From 1976, in parallel with this import and distribution activity, a passion for engines led **BMC** to start producing complete racing motorcycles for the TT1 Championship Class 1000 (now Superbikes), with a fair degree of success and a dedicated team.

Expanding from motorcycles to racing cars, in 1995 **BMC** began to work in Formula 1 with Ferrari, designing and producing air filters that guaranteed high performance and reliability. Over the past two decades of collaboration in these competitions, **BMC** has contributed to winning 12 constructors' and 11 drivers' championships.

The know-how acquired as a Formula 1 supplier was quickly transferred to the aftermarket and, in 1996, **BMC** began to produce high-performance air filters at increasingly high standards of qualitative excellence. Ever since then, the company produces replacement air filters in oiled cotton, designed and built by engineers and technicians to allow regeneration and use in the most extreme conditions, guaranteeing durability, reliability and engine performance.

BMC has also served the OEM market as supplier to the most prestigious car manufacturers since 1999, designing, developing and producing complex air filters and entire air intake systems for the super and hyper car segments.

Close collaboration with the Yamaha MotoGP team began in 2005, leading to numerous world championship titles and an extension of the collaboration to the world of Superbikes. Following the opening of a new advanced composites lab, specialised in the processing of carbon fibre and other innovative materials, **BMC** also entered into the aerospace, industrial and nautical sectors between 2008 and 2010.

AFTERMARKET

The vast range of **BMC** filtration systems for cars and motorcycles, often backed by international patents, comprises various types of product:

- **Car and motorcycle replacement filters**, made from oiled cotton and usable as replacements for the original paper filters;
- **Conical filters for direct intakes (single air and twin air)**, that completely replace standard car and motorcycle air-boxes;
- **Carbon Dynamic Air-box (CDA) and Oval Trumpet Air-box (OTA)**, dynamic car intake systems designed to obtain high performance and made using carbon-fibre boxes;
- **Direct Intake Airsystem (DIA)**, dynamic car intake system with plastic air-box;
- **Carbon Racing Filter (CRF)**, new sports air filters for cars and motorcycles with a carbon-fibre frame.

The various air intake systems are complemented by a vast range of specific accessories that simplify their assembly and installation.

TECHNICAL ASPECTS OF THE AFTERMARKET FILTERS

BMC air filters are made using a «Full Moulding» process that obtains the characteristic red filter from a single mould. The special rubber used in **BMC** filtration systems does not deform over time, guaranteeing excellent adhesion to air boxes of any shape. The filtration element comprises an aluminium mesh treated with epoxy resin, ensuring protection against both fuel vapours and oxidisation due to humidity in the air, and layers of special cotton soaked in mineral oil, which enhance filtration without compromising air permeability. **BMC** filtration systems improve engine performance in terms of both power and torque, without comprising reliability. **BMC** air filters can be washed and regenerated using the specific washing kit; they comply with international standards ISO 9001 and ISO 5011.

OEM

In the OEM (Original Equipment Manufacturing) market, **BMC** is a Tier 1 supplier of the main international car manufacturers, which appreciate the ability of the company to find innovative solutions to complex problems. Building on the experience accumulated over more than two decades of activity in Formula 1, constant investment in R&D and a laboratory specialised in the processing of composite materials, **BMC** designs, develops and produces in-house air filters and complete air intake systems that increase performance in the rarefied world of super and hyper cars.

The importance of an air filter

The explosive stroke of an internal combustion engine is the result of the combustion of fuel with a combustion-enabling element inside the cylinder, namely the oxygen in the air. Bearing in mind the importance of the filter, it should be remembered that the combustion of 1 kg (1.35 liters) of petrol requires 14.7 Kg (12.245 liters) of air, with a stoichiometric ratio of 14.7:1.

Air is an essential combustion element and its quality is indispensable in optimizing the process and, in turn, improving engine performance. The filter has the task of guaranteeing both optimal filtration and the simultaneous retention of impurities.

Air filter functions

The characteristics of a cotton filter can be summarized in two words: permeability and retention. Permeability: the filter must create the lowest possible barrier to enable the highest possible passage of air. Retention: the retention of all solid particles in the air.

BMC air filters are made of a multi-layer fabric soaked in oil, inserted between two aluminum nets.

Polluting materials, with a negative charge, are captured by the positively charged, oil-impregnated fibers.

The filtering process is continuous and foreign particles are deposited on the fabric without blocking the air flow. With their cotton-filtering elements, BMC air filters offer the best results: the highest level of permeability plus maximum retention and screening. Their permeability is measured by the "Pressure Drop", which is the difference between upstream and downstream pressure as airflow speed varies.

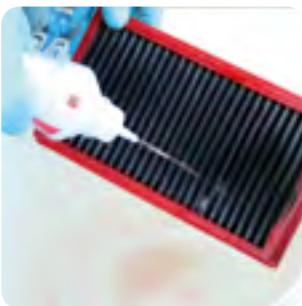

Regeneration Instructions

The purpose of the washing procedure is to clean the filtering element of the oil and impurities that have been trapped.

During the procedure we suggest removing the keys from the ignition, keeping the engine cold and engaging first gear.

Remove the filter and tap it gently on a solid surface to remove the largest impurities (such as grass, gravel and bugs) and clean the airbox. Be careful to avoid damaging the filtering element.

1

Wait about 20-30 minutes while the product acts.

2

Let the filter dry naturally outdoors without exposing it to direct sunlight. The filter is dry when it no longer releases water or humidity. This can be checked using compressed air, gently and from a safe distance in order to avoid damaging the cotton fabric.

3

Wash the filter using a water hose provided with jet regulation fittings. Rinse it well on both sides until the filter is clean. Check for the absence of impurities by holding it against the light. Bear in mind that the filtering material will not be perfectly white but it must be free of impurities. Use the bowl only to hold the dirty water and do not place the filter in it, to avoid soiling it. The dirty water must be disposed of at a specific recycling depot. If the filter is not sufficiently clean please repeat the operations described above.

Re-oiling Bottle

It is important to use the correct quantity of oil. Too much oil can damage the debimeter, while insufficient oil can provide less protection for the engine.

For more information on the correct quantity for your filter, please check the BMC Air Filters website.

Let the filter totally absorb the oil. This can be checked by checking the evenness of the red color on both sides of the filter.

6

Cut off the spout dispenser in a "v" shape and screw it into the bottle. Put the spout on the first pleat, squeeze the bottle gently and start the re-oiling process. Re-oiling must be carried out on only one side of the filter. To avoid a build-up of oil we recommend carrying out the operation without interruption.

7

Remove surplus oil by dabbing the filter with a clean cotton cloth.

8

Re-oiling Spray

Spray the oil evenly onto both sides of the filtering element from a distance of 15 cm.
For more information on the correct quantity for your filter, please check the BMC Air Filters website.

9

After these steps have been completed the filter can be reassembled immediately.

CRF - Carbon Racing Filter

The CRF, Carbon Racing Filter, is the new high-performance air filter designed for on-road and competition vehicles. It features a **100% carbon fiber support structure with a cotton filter element**.

The CRF, designed and manufactured entirely by BMC's Racing and Advanced Composite Division, is the result of the company's know-how derived from more than 10 years' experience in the racing world, contributing improved results and higher performance to super-powered sports engines.

Main features

1) The CRF air filter takes advantage of innovative technical solutions to optimize airflow dynamics to the engine. The shape of the CRF is designed to use the entire available volume of the original airbox thanks to its larger filtration surface.

The result is better airflow during the intake phase, thereby maintaining constant airbox pressure.

2) The structure of the CRF interfaces directly with the original airbox, providing a perfect seal and easy fitting. It is made entirely of pre-impregnated carbon fibers, cured in an autoclave. For this reason CRF is more lightweight while retaining excellent characteristics in terms of rigidity and mechanical resistance.

3) The filtering element is made of a special multi-layer filtration material in RACE configuration which is impregnated with low viscosity oil and held between an epoxy-coated (to prevent oxidation) aluminum mesh. This enables increased permeability with low airflow

resistance and guarantees highly efficient filtration.

4) The CRF is created with the purpose of withstanding the vibrations and heat produced by motion both on the road and during intensive racetrack use.

5) Like all BMC air filters, CRF can be regenerated and reused. Once the saturation level has been reached the filter can be regenerated through a washing and re-oiling process using the BMC washing kit.

6) The CRF Air Filter is patented and has a registered industrial design.

7) The CRF filter is created for people who like their vehicle to achieve a high level of performance. It is the perfect filter for those looking for the **enhanced quality** and **technical development** that comes from the racing world.

Replacement air filters

BMC air filters, as a replacement for those originally fitted, are high-performance components that give improved airflow intake capacity in comparison with that of traditional filters, with clear benefits for combustion quality. BMC air filters are regenerable and, for this reason, long-lasting.

BMC filters are made of multi-layered cotton gauze soaked with low-viscosity oil and covered with an epoxy-coated alloy mesh to ensure protection from petrol fumes and oxidation from air humidity.

Choosing a BMC cotton filter gives the following advantages:

- **Improved power**
- **Optimum performance**
- **Engine durability**
- **Fuel saving**

Impurities are filtered through screening and retention, being captured by the cotton fibers and held in place by the oil. This procedure does not block the flow of air, thus guaranteeing stable, long-term air filter performance.

BMC air filters are manufactured using a "Full Molding" system that enables the characteristic red filter to be produced from a single mold. The material used for the BMC air filtering system is long-lasting, with optimum adhesion features to fit the shape of all types of airboxes.
